FOR IMMEDIATE RELEASE

BULLETIN ON NEW ACTIVATED CARBON MINI MODULES

A new bulletin from Calgon describes the "Model 2 Dual Module Adsorber," a new mini adsorption system for removal of dissolved organics from water or liquid process streams at low flow rates ranging from a few gallons per minute (GPM) to 200 GPM. The new portable adsorbers complement similar but larger Calgon adsorbers used for higher flow rate water treatment applications.

Bulletin includes features, available options, modes of operation, specifications, flow rates and materials of construction.

Bulletin 27-61 from Activated Carbon Division, Calgon Corporation, P.O. Box 1346, Pittsburgh, PA 15230.
